# Cyborg Mutant Zombie Circus – print instructions

## Printing cards

Files with cards to print are in two separate PDF files with different orientation – cmzc-vertical.pdf (portrait) and cmzc-horizontal.pdf (landscape). We recommend printing on A4 cardboard (up from 200, ideally 300 g/m2) without scaling (keep original size). Therefore you can use small card sleeves (44x68mm) for the cards. When printing from both sides of paper, use turning according the long side of paper (default option on most printers).

## Other game components

We recommend printing the rules and for playing you will need dice and tokens.

## Tokens

You can use coins or any other small objects as the tokens. During the game you should not need more than 10 of them.

## Dice

You will need six 6-sided dice for playing with specific emoticons on them. At the moment there is several ways how to solve this requirement:

- Use standard dice (with 1-6 values) and convert the result, e.g.: 1 – epic success, 2 – double success, 3 – success, 4 – boring, 5 – fail, 6 – tragic fail
- Use standard dice draw emoticons with markers or use stickers
- Get blank six-sided dice and draw the emoticons
- Check possibility of  ordering the hand-made dice from JerryLabs on
